

## **Biotic diversity (including domestic livestock) and its influence on transmission of human schistosomiasis in Africa**

Eric S. Loker

Director, NIH COBRE Center for Evolutionary and Theoretical Immunology  
Curator, Parasite Division, Museum of Southwestern Biology  
Department of Biology, University of New Mexico, Albuquerque, New Mexico 87131, USA

Eric S. Loker (Sam) serves as Director of an NIH-funded COBRE Center for Evolutionary and Theoretical Immunology, and as Curator for the Parasite Division of the Museum of Southwestern Biology, within the Department of Biology at the University of New Mexico in Albuquerque, New Mexico, USA. He has a long-standing interest in parasitology and in 2015 co-authored with Dr. Bruce V. Hofkin a parasitology textbook entitled, "Parasitology: a conceptual approach," Garland Press. His research interests center on the biology of schistosomes responsible for causing schistosomiasis in humans and animals, including studies of molecular phylogenetics of schistosomes and their immunological interactions with the snails that serve as intermediate hosts for schistosomes. His current work involves field-oriented studies on schistosomiasis transmission and control in Kenya where he has maintained a long-term collaboration with Dr. Gerald Mkoji of the Kenya Medical Research Institute.
